

SHOOTDAY · INTERNAL & CONFIDENTIAL

SDR KPI & Compensation Strategy

Credit-rate tiers, B2C kicker and a Team Lead plan, calibrated on June actuals
— with ready-to-send one-page summaries for the team and the founder

Prepared for **Chase Anderson**, SDR Team Lead

28 July 2026

Data: Bookings SDR View (1,668 leads) · Full booking history · Aircall call log (4,100 calls)

Cross-referenced against the Strategic Briefing and SDR Team Lead Onboarding docs

Version 3 — supersedes v1 and v2

VERSION 3 · PROPOSAL

SDR KPIs & Compensation — Proposal

For: Chase Anderson, SDR Team Lead · **Date:** 28 July 2026 · **Supersedes:** v1, v2

Data: 1,668 SDR-owned leads (May–July 2026), 4,100 Aircall records, full booking history, the Strategic Briefing, the Team Lead Onboarding doc, and the live commission code. Every figure was produced by replaying the dashboard's own definitions against the raw CSVs; the replication reconciles exactly to the July paycheck, so these are real numbers.

Three one-page summaries are at the back: A (SDR plan, internal, with the math), B (SDR plan, team-facing, ready to send), C (your plan, ready to take to Serge).

Part 0 — The numbers everything rests on

	Value	Basis
Revenue per held B2B meeting	\$547	May+June matured
Held meeting → closed deal	42.5%	54 deals from 127 held meetings
Revenue per qualified no-meeting handoff	\$278	exactly half a held meeting
SDR-sourced AOV	\$1,287	vs \$1,466 company-wide (SDRs work the sub-\$1k tier)
Revenue per B2B lead / per B2C lead	\$143 / \$9	June, matured
Cost per held meeting (June actual)	\$29.87	against \$547 of revenue
87% of revenue closes within 21 days	matches briefing's 86%	close-lag curve

A held B2B meeting is worth \$547 and costs \$30 to produce. That 18:1 ratio is why there is room to pay more, and it is the number to defend as the team scales.

Cost-per-lead, clarified — you asked whether June's \$4,511 covered four people. It did not. June was **MJ and Gospel only**; Mark and Levi started in July.

	SDRs	Comp	Leads	Cost/lead	Cost/qualified	Cost/held mtg	Comp ÷ revenue
June	2	\$4,511	652	\$6.92	\$29.68	\$29.87	5.7%
July	4	\$6,818	915	\$7.45	\$35.88	\$51.26	26.9%

Revenue here includes instant closes, per your decision. That alone moves June from 7.0% to **5.7%** — real headroom that did not exist in v2.

Part 1 — Your KPIs

Primary: Team B2B Lead → Deal Rate

Month	B2B leads	Closed	Lead → deal
May	66	13	19.7%
June	449	48	10.7%
July	564	16	2.8% (<i>immature</i>)
Company benchmark			14.2%

Your call, and it is the right one. It is the whole machine in one number and no marking decision can move it. Read it matured — prior month, run 3–4 weeks later, same timing as commission.

Supporting 1: Team Non-Response Rate — you were right about this

You flagged it and the data backs you hard. It is the briefing's single biggest leak (29% of all company leads) and it tracks almost perfectly inverse to output:

Month	SDR	B2B leads		Held rate	Rev/B2B lead
June	MJ	225	32.9%	27.6%	\$176
June	Gospel	224	36.6%	29.9%	\$147
June	Team	449	34.7%	28.7%	\$161
July	Mark	101	26.7% ← best	32.7% ← best	\$7
July	MJ	178	38.2%	20.2%	\$49
July	Levi	119	45.4%	19.3%	\$27
July	Gospel	166	55.4% ← worst	18.1% ← worst	\$58
July	Team	564	42.7%	21.6%	\$39

Lowest non-response = highest held rate, every time, in both directions. Team NR went 34.7% → 42.7% between June and July, and held rate fell with it. Company baseline is 29%; **the team is 5–14 points worse than the company average on the metric the briefing calls the biggest leak in the funnel.** That is your headroom, and it is why it sits in your comp plan (Part 4).

One caveat to keep in mind: non-response and held-meeting rate are partly mirrors of each other — a lead is either engaged or it isn't. NR is the better *coaching* number because it names the failure directly; held rate is the better *scoreboard* number because it counts the win.

Supporting 2: Team Held Meeting Rate

June 28.7%, July 21.6%. The leading half of your primary KPI: *lead → deal = held meeting rate × held-to-deal rate*. When lead → deal moves, this tells you whether the cause was your team's throughput or the AEs' closing.

Diagnostics — track, don't get paid on

Speed-to-lead. You were right to keep it off your scorecard; it is too noisy month to month. But the evidence is strong and it drives non-response: leads touched within 1 hour produce **\$171/lead**; leads touched after 4 hours produce **\$61** and close at 5.8% instead of 13.1%. Critically, those slow leads *still get booked into meetings at 23.3%* — which is exactly why the old plan, which paid on booked meetings, could not tell good work from bad.

Coach "**nothing sits past the hour,**" not "call in five minutes" — sub-5-minute dialling underperforms a 5–60 minute response for both tenured SDRs individually (MJ \$130 vs \$264/lead; Gospel \$92 vs \$226). The likely cause is dialling before reading the enquiry.

Never use dial counts. June leads needing 1 dial produced \$251/lead; leads needing 7+ produced \$20. In July Gospel made 842 dials at a 6.8% connect rate, Levi 349 at 51.9%. Activity metrics rank them backwards.

Part 2 — What is wrong with the current plan

Problem	Evidence	Fix in v3
Qualified Leads Incentive is dead	40% floor vs 28–35% actual. Fired twice in six SDR-months	Removed
Meeting Incentive is maxed out	MJ booked 41.3% in June; top bracket starts at 40%. His marginal reward for meeting #94 was \$0 — and 91% of his variable came from that saturated bracket	Uncapped top tier
Pays on booked, not held	>4h leads book at 23.3% but close at 5.8% vs 13.1%. Booking is nearly speed-independent; value is not	Held meetings only
\$200 cliffs	Gospel's June rate was 40.2%. At 39.9% he earns \$800; at 40.0%, \$1,000	1.5-pt bands, max \$55 step
B2C inflates the rate	Numerator counts B2B+B2C, denominator B2B only — inflates rates 4–15 points, worth ~\$400/SDR/month	B2C on its own line
Small books win	July: Mark earned the top bracket on \$486 of revenue; MJ earned a lower one on \$8,156	Volume factor
Revenue link is noise	0.25% paid MJ \$96 — 9% of variable. No reason to prefer a \$3,000 shoot over a \$600 one	0.5%

Problem	Evidence	Fix in v3
Multiplier is uncomputable	30-day window ending a <i>week ago</i> , never matching the payout month	Removed entirely

Why the no-show multiplier is gone. Paying on *held* meetings already prices a no-show at the full value of the meeting. A second penalty on top double-counts the same event — and, as you said, no-show recovery now sits with the SDR anyway.

Part 3 — The SDR plan

3.1 Credits

$\text{Credits} = \text{held B2B meetings} + 0.5 \times \text{qualified B2B leads with no meeting}$
 $\text{Credit Rate} = \text{Credits} \div \text{B2B leads assigned}$

Both sides B2B only. No new Airtable state, no new marking convention — the no-meeting component uses the qualified definition you already have: *Hot, Warm, Closed, Lost, Qualified_SDR, or any refund status, with no Meeting Status set.*

Why 0.5: those handoffs are worth **\$278/lead against \$547** for a held meeting — 51%. The data set the weight, not a negotiation. Re-check it in 90 days once volume builds.

No cap, per your call. The gaming risk is real but self-limiting: when an AE bounces a lead it becomes *Disqualified AE*, which is **not** in your qualified set, so the SDR loses the credit automatically. Verified in the data — no AE-disqualified lead counts as qualified anywhere. Watch one number monthly: if anyone's no-meeting credits exceed ~30% of their total credits, look at their marking. Today the highest is MJ at 8%.

3.2 The tier table

Credit rate	Tier	Credit rate	Tier
under 18%	\$0	30 – 31.5%	\$655
18 – 19.5%	\$250	31.5 – 33%	\$705
19.5 – 21%	\$300	33 – 34.5%	\$760
21 – 22.5%	\$350	34.5 – 36%	\$810
22.5 – 24%	\$400	36 – 37.5%	\$860
24 – 25.5%	\$455	37.5 – 39%	\$910
25.5 – 27%	\$505	39%+	\$960 + \$55 per credit above 39%
27 – 28.5%	\$555		

Credit rate	Tier	Credit rate	Tier
28.5 – 30%	\$605		

Why the floor is 18%, not 20%. In the old plan 20% was arbitrary. Here it is derived: at \$547 per held meeting and a 7% cost target, an SDR on a \$1,200 base needs ~31 held meetings to cover their own base. On a 175-lead book that is **17.9%**. Below the floor the SDR is not yet paying for themselves.

Why it never caps. Above 39% the tier becomes \$55 per additional credit, uncapped — the direct fix for the flaw that made the old plan pointless at the margin.

3.3 The other three components

Volume factor: $\min(1.0, \text{B2B Leads} \div 160)$, applied to the tier only.

You asked me to choose between the plan's 275/Coordinator and the reality of ~175. **I chose 160** — just below the delivered range so a normally-loaded SDR is unaffected (June 225/224 → 1.00; July MJ 178, Gospel 166 → 1.00), while a materially under-loaded one is pro-rated (Mark's 101 → 0.63). Using 275 would zero out everyone's tier for a routing decision they don't control; using 175 would penalise a normal month. Revisit when routing actually moves toward capacity.

B2C kicker: \$12 per held B2C meeting. Its own line, never touching the rate. This answers your question directly: B2C is worth **\$9/lead against B2B's \$78**, so paying it inside the same rate meant paying full price for an eighth of the value. On its own line it stays worth chasing — free leads, no media cost — without ever distorting the main number.

Revenue share: 0.5% of closed revenue on own-created leads. Your instinct was right at 1%: MJ's June revenue would have paid \$384, roughly 40% of his variable, arriving weeks late from a deal an AE closed — exactly the "I've banked enough, I can ease off" money. At 0.5% it pays \$222: enough that a \$3,000 multi-city shoot feels different from a \$600 headshot, not enough to coast on. The tier motivates; the revenue share steers.

AE-disqualified gate, on the tier only: under 10% → $\times 1.00$ · 10–15% → $\times 0.90$ · over 15% → $\times 0.75$.
Computed on the payout month and reproducible by hand. Current rates: MJ 5.6–8.3%, Gospel 7.2–10.4%, Mark 0%, Levi 7.1%.

3.4 What it pays

June 2026 — the reference month:

SDR	B2B	Held	No-mtg	Credits	Rate	Tier	B2C	Rev		Was		Total
MJ	225	62	11	67.5	30.0%	\$655	\$132	\$222	\$1,009	\$946	+7%	\$2,209
Gospel	224	67	6	70.0	31.2%	\$655	\$132	\$171	\$958	\$865	+11%	\$2,458
Team	449	129							\$1,967	\$1,811	+9%	\$4,667

Comp ÷ revenue **5.9%** · cost/lead **\$7.16** · cost/qualified **\$35.36** · cost/held **\$36.18**.

July 2026 — for reference only, not a benchmark. MJ \$371, Gospel \$321, Mark \$546, Levi \$287. That is well below the old plan, and it should be: July's variable was largely a \$1,000 bracket paid on *booked* meetings that didn't convert. July's revenue component is also understated — the cohort averages 12 days old, and only ~68% of its revenue has landed. Note the volume factor working as intended: Mark's 33.2% rate on a 101-lead book earns \$480 rather than \$760, and he now ranks behind MJ instead of topping the team on \$486 of revenue.

3.5 Cost across performance levels

Four SDRs, 175 B2B leads each, \$600 revenue per held meeting:

	Credit rate	Team revenue	Variable/SDR		Total comp	
Poor (July-like)	22.9%	\$86,400	\$628	49%	\$7,612	8.8%
Below target	26.9%	\$103,200	\$754	59%	\$8,116	7.9%
June level	32.6%	\$127,200	\$984	77%	\$9,036	7.1%
Strong	36.6%	\$144,000	\$1,160	91%	\$9,740	6.8%
Very strong	40.0%	\$158,400	\$1,374	108%	\$10,596	6.7%
Exceptional	43.4%	\$172,800	\$1,722	135%	\$11,988	6.9%

Your "double their pay if they kill it" is built in. Variable passes 100% of base at a 40% credit rate — total pay doubles. That is 9 points above June, genuinely exceptional, and reachable.

And 7% holds. The ratio *improves* as they perform, bottoming at 6.7%. It only breaches 8% in a poor month, which is the plan telling you the truth rather than hiding it.

3.6 On the 7% target

You agreed it is a revenue target, not a comp lever, and the arithmetic confirms it. Fixed base for four SDRs is **\$5,100/month** — spent before anyone books anything. For total comp to sit at 7% while paying a competitive variable, the team needs roughly **\$130,000/month** of sourced revenue. June ran at \$39,299 per SDR; four at that level produce \$157,000. **Hitting 7% and ramping Mark and Levi to June productivity are the same objective.**

Part 4 — Your plan

The pitch to Serge is cost-neutral at status quo. You are paid \$3,500 base plus a \$1,000 guarantee that expires after August. Proposal: **fold it into a flat \$4,500 base** — the company pays exactly what it pays today — **and add variable that pays nothing unless the business improves.** Serge only pays more when he gets more.

Base \$4,500. Variable \$0 at status quo, up to ~\$3,000 (66%) at exceptional.

1 — Team B2B lead → deal rate (*matured, prior month*)

Rate	Payout	
under 11%	\$0	← June was 10.7%
11 – 12.5%	\$300	
12.5 – 14%	\$600	
14 – 15.5%	\$950	← company benchmark 14.2%
15.5 – 17%	\$1,250	
17%+	\$1,500	

2 — Team non-response rate (*B2B*)

Rate	Payout	
34%+	\$0	← June 34.7%, July 42.7%
31 – 34%	\$200	
28 – 31%	\$400	← company baseline 29%
25 – 28%	\$600	
under 25%	\$800	

3 — Revenue override: 1.0% of team revenue above (\$40,000 × active Coordinators)

The threshold scales with headcount deliberately — it pays for *productivity per head*, never for hiring. \$40,000 is just above June's \$39,299 per SDR, so adding a body earns you nothing until they produce.

Scenario	Lead → deal	Non-resp	SDRs	Team revenue	Variable		% of base
Status quo (June × 4)	10.7%	34.7%	4	\$157,196	\$0	\$4,500	0%
Modest gain	12.0%	32.0%	4	\$175,000	\$650	\$5,150	14%
Good	13.5%	30.0%	4	\$200,000	\$1,400	\$5,900	31%
Very strong	15.0%	27.0%	4	\$225,000	\$2,200	\$6,700	49%
Exceptional	16.5%	24.0%	4	\$250,000	\$2,950	\$7,450	66%
Outstanding (6 SDRs)	17.5%	23.0%	6	\$360,000	\$3,500	\$8,000	78%

No hiring milestones — per your call, building the team is the role, not a bonus.

Alignment: they are paid for *producing* meetings, you for what those meetings *become*. Neither of you can win by pushing volume that doesn't close.

Part 5 — Rollout and two things to check

The timeline is safe

Paid	Covers	Plan
August	July performance	Old plan — already worked, unchanged
September	August performance	New plan

Nothing is retroactive. The one hard deadline: **the team needs the new rules before 1 August**, or they spend August optimising for a plan that no longer exists. Appendix B is written to send.

The duplicate/wrong-info filter — working, but currently catching nothing

You asked me to confirm bad leads are excluded from the math. **The code is correct:** `isLeadExcluded()` (`index.html:3270`) drops any lead whose Disqualified reason is *Duplicate record* or *Wrong info*, and `commissionMetricsForSDR` filters those rows out **before any count** — so they never appear in leads, qualified, meetings or revenue. Both sides of every ratio.

But it currently matches zero leads. Across all 1,668 SDR leads in May–July, not one carries either reason. The reasons actually in use are: Not responsive (397), Just browsing (158), Price sensitive (130), Found other alternative (78), Session canceled (67), Stopped responding (27), We don't provide the service (27).

So either the team isn't using those options, or Airtable spells them differently. **Worth checking the Airtable option list** — the guard is real but it is guarding nothing today.

Also confirmed

Your qualified definition is already the live one everywhere that pays: `STRICT_QUALIFIED_STATUSES` (`index.html:3260`) drives `isQualifiedLead`, which the Summary Cards, charts, Mandate Scoreboard, Capacity & Cost and the Commission Calculator all call. A second, broader list exists at line 3136 but is used **only** by Data Hygiene, which is flagged in-code as under construction and deliberately frozen. It touches no payout. Last month's rates are already on the current definition, so nothing needs restating.

Open

July's softness is still unexplained — held rate fell for both tenured SDRs while region mix moved from 95% North America to 62% NA / 30% Europe, and the briefing has rest-of-world converting at 11% against NA's 16%. Your read is holidays and summer slowdown, and July is not used as a benchmark anywhere in this plan. But if the cause is regional mix rather than seasonality, the tier thresholds should eventually differ by desk. Revisit at the quarterly re-benchmark (end of October), by which time August and September will have settled it.

Appendix A — SDR Plan, Internal

Effective: August performance, paid September. Grandfathered: July paid on the old plan.

The formula

Credits = held B2B meetings + 0.5 × qualified B2B leads with no meeting

Credit Rate = Credits ÷ B2B leads assigned

Volume Factor = min(1.0, B2B leads ÷ 160)

VARIABLE = Tier(Credit Rate) × Volume Factor × AE-DQ Gate

+ \$12 × held B2C meetings

+ 0.5% × closed revenue on own leads

TOTAL PAY = Base + Variable

Credit rate	Tier	Credit rate	Tier
under 18%	\$0	30 – 31.5%	\$655
18 – 19.5%	\$250	31.5 – 33%	\$705
19.5 – 21%	\$300	33 – 34.5%	\$760
21 – 22.5%	\$350	34.5 – 36%	\$810
22.5 – 24%	\$400	36 – 37.5%	\$860
24 – 25.5%	\$455	37.5 – 39%	\$910
25.5 – 27%	\$505	39%+	\$960 + \$55/credit above 39%
27 – 28.5%	\$555		
28.5 – 30%	\$605		

AE-DQ gate: under 10% → ×1.00 · 10–15% → ×0.90 · over 15% → ×0.75.

Why each number

Parameter	Value	Derivation
No-meeting weight	0.5	\$278/lead vs \$547 for a held meeting = 51%
Tier floor	18%	\$1,200 base ÷ 7% ÷ \$547 per meeting ≈ 31 meetings on a 175-lead book
Volume reference	160	Just below delivered range (June 224–225, July 166–178); pro-rates only under-loaded books
B2C rate	\$12	B2C is \$9/lead vs B2B \$78 — pays for the meeting, never distorts the rate
Revenue share	0.5%	1% would be ~40% of variable, arriving late from an AE's close
Top tier	\$960 + \$55	Variable passes 100% of base at a 40% credit rate → pay doubles

Calibration against actuals (June, the reference month)

SDR	B2B	Held	No-mtg	Rate	Tier	B2C	Rev	Variable	Was	Δ
MJ	225	62	11	30.0%	\$655	\$132	\$222	\$1,009	\$946	+7%
Gospel	224	67	6	31.2%	\$655	\$132	\$171	\$958	\$865	+11%

Team comp ÷ revenue **5.9%**. Cost per held meeting **\$36.18** against \$547 of revenue generated.

Cost control (4 SDRs, 175 leads each) — comp ÷ revenue: poor month 8.8% · June level 7.1% · very strong **6.7%** · exceptional 6.9%. Variable passes **108% of base** at a 40% credit rate, so pay doubles at genuinely exceptional performance. The ratio improves as they perform and only breaches 8% in a bad month.

Watch monthly: (1) no-meeting credits as a share of total credits — investigate above ~30%, today's max is 8%; (2) AE-disqualified rate — Gospel at 10.4% and drifting; (3) whether the volume factor is biting anyone who should be at 1.0 — reset the 160 reference if routing changes.

Appendix B — SDR Compensation, effective August

Your pay = Base + Variable. Your base does not change. Everything below is the variable.

What you earn on

Your work is measured on **credits**, from the B2B leads assigned to you:

- **1 credit** for every meeting that actually happens (Meeting Status = *Meeting Done*)
- **½ credit** for a lead you qualify and hand to an AE where no meeting is needed — the ones where the client says "*just email me*" and it still goes somewhere

Your Credit Rate = your credits ÷ your B2B leads. That rate sets your tier:

Credit rate	You earn	Credit rate	You earn
under 18%	\$0	30 – 31.5%	\$655
18 – 19.5%	\$250	31.5 – 33%	\$705
19.5 – 21%	\$300	33 – 34.5%	\$760
21 – 22.5%	\$350	34.5 – 36%	\$810
22.5 – 24%	\$400	36 – 37.5%	\$860
24 – 25.5%	\$455	37.5 – 39%	\$910
25.5 – 27%	\$505	39% and above	\$960, plus \$55 for every extra credit
27 – 28.5%	\$555		
28.5 – 30%	\$605		

There is no cap. Past 39% every additional credit pays \$55. If you have an outstanding month, your variable can exceed your base — your pay doubles.

Plus two more things

- **\$12 for every B2C meeting held.** Separate from everything above. B2C leads are free to the company, so every one you convert is upside.
- **0.5% of the revenue** from deals that close on your leads. A \$3,000 shoot pays more than a \$600 one.

Two things that reduce it

- **If you handle fewer than 160 B2B leads in a month**, your tier is pro-rated to the leads you actually worked (e.g. 120 leads → 75% of the tier). A high rate on a small book isn't the same achievement as a high rate on a full one.
- **If more than 10% of what you hand over gets bounced back** by an AE as wrongly qualified, your tier is reduced (10–15% → 90%, over 15% → 75%). Everyone is comfortably clear of this today.

What counts

Qualified	Sales status = Hot, Warm, Closed, Lost, Qualified_SDR, or any refund status
Meeting held	Meeting Status = <i>Meeting Done</i> . A no-show or rejection is not a held meeting
Not counted	Leads marked Duplicate record or Wrong info — removed from both your credits and your lead count, so they never hurt your rate
Which month	Leads are counted by the month they were created
When you're paid	Your variable is calculated from last month's leads and paid with this month's salary. A deal booked at month end needs time to close — the one-month lag makes sure it counts

The short version

Book meetings that actually happen, on the leads you're given. Not meetings booked — meetings held. Everything else follows from that.

Appendix C — Team Lead Compensation Proposal

Chase Anderson, SDR Team Lead · Proposal for August onward

The ask

Current: **\$3,500 base + \$1,000 guarantee**, guarantee expiring after August (month 3).

Proposed: **\$4,500 flat base + performance variable that pays \$0 unless the business improves**.

This is cost-neutral today. The company pays \$4,500 now and would pay \$4,500 under this plan at current performance. Every additional dollar is funded by measurable gains.

The variable — three components

<i>(matured, prior month)</i>	Payout	<i>(B2B)</i>	Payout
under 11% — June was 10.7%	\$0	34%+ — June was 34.7%	\$0
11 – 12.5%	\$300	31 – 34%	\$200
12.5 – 14%	\$600	28 – 31% — company baseline 29%	\$400
14 – 15.5% — company benchmark 14.2%	\$950	25 – 28%	\$600
15.5 – 17%	\$1,250	under 25%	\$800
17%+	\$1,500		

3 · Revenue override — 1.0% of team-sourced revenue above (\$40,000 × active Coordinators). The threshold scales with headcount, so this pays for productivity per head and never for hiring. \$40,000 sits just above June's actual \$39,299 per SDR.

What it costs the company

Scenario	Lead → deal	Non-resp	Team revenue	Variable		% of base
Status quo	10.7%	34.7%	\$157,196	\$0	\$4,500	0%
Modest gain	12.0%	32.0%	\$175,000	\$650	\$5,150	14%
Good	13.5%	30.0%	\$200,000	\$1,400	\$5,900	31%
Very strong	15.0%	27.0%	\$225,000	\$2,200	\$6,700	49%
Exceptional	16.5%	24.0%	\$250,000	\$2,950	\$7,450	66%
Outstanding (6 SDRs)	17.5%	23.0%	\$360,000	\$3,500	\$8,000	78%

At the exceptional case the company pays **\$2,950 more per month** and receives roughly **\$93,000 more monthly revenue** than the status quo — a **31:1 return** on the incremental compensation.

Why these two metrics

Lead → deal is the whole funnel in one number, it is the business outcome, and no marketing decision can move it.

Non-response is the largest leak in the company's funnel per the Strategic Briefing (29% of all leads). The SDR team runs at 34.7–42.7% — 5 to 14 points *worse* than the company average. In the data it tracks inverse to output without exception: in July the SDR with the lowest non-response rate also had the highest held-meeting rate, and the SDR with the highest had the lowest. Both are team-level and neither can be moved by working harder personally — only by building a team that converts better. That is the job.

Alignment: the Coordinators are paid for *producing* qualified meetings; the Team Lead for what those meetings *become*. Neither can win by pushing volume that does not close.
