

SHOOTDAY · INTERNAL & CONFIDENTIAL

SDR KPI & Compensation Strategy

Held-meeting credit tiers, B2C kicker, and a Team Lead plan —
calibrated to a 7% cost ceiling against May–July 2026 actuals

Prepared for **Chase Anderson**, SDR Team Lead

28 July 2026

Data: Bookings SDR View (1,668 leads) · Full booking history · Aircall call log (4,100 calls)

Cross-referenced against the Strategic Briefing and SDR Team Lead Onboarding docs

Version 2 — supersedes v1 of 28 July 2026

VERSION 2 · INCORPORATES REVIEW FEEDBACK

SDR KPIs & Compensation Strategy — Version 2

Prepared for: Chase Anderson, SDR Team Lead **Date:** 28 July 2026 **Supersedes:** v1 (28 July 2026)

Data: Bookings SDR View (1,668 SDR-owned leads, May–July 2026), full booking history, Aircall call log (4,100 calls, 14 May – 28 July), Strategic Briefing v1.0, SDR Team Lead Onboarding v1.0, and the live commission logic in `index.html`.

Every figure below was produced by replaying the dashboard's own definitions against the raw CSVs. The replication reconciles to the July paycheck exactly — MJ's \$946 = the \$1,000 meeting bracket × 0.85 quality multiplier + \$96 New Sales; Gospel's \$865 = the \$800 bracket + \$65 New Sales — so these are the real numbers, not estimates.

What changed in v2: held meetings replace booked meetings throughout; the no-show multiplier is removed; qualified handoffs that never produce a meeting are now paid for; B2C moves to its own line item; the revenue share drops to 0.5%; a 7%-of-revenue cost ceiling is treated as a binding constraint; and a compensation plan for the Team Lead is included.

Part 0 — The numbers everything else rests on

Metric	Value	Basis
Revenue per held B2B meeting	\$547	May+June matured cohorts
Held meeting → closed deal	42.5%	54 deals from 127 held meetings
SDR-sourced AOV	\$1,287	vs \$1,466 company-wide (SDRs work the sub-\$1k tier)
Revenue per B2B lead	\$143 (June)	vs \$9 per B2C lead
Revenue per qualified no-meeting handoff	\$278	exactly half a held meeting — see Part 2
87% of revenue closes within 21 days	matches briefing's 86%	close-lag curve
Cost per lead (June, actual)	\$6.93	\$4,511 comp ÷ 652 leads
Cost per held meeting (June, actual)	\$34.97	against \$547 of revenue generated

A held, qualified B2B meeting is worth \$547. That is the unit the whole plan is priced against. Today it costs \$35 to produce — a 15:1 return before delivery cost. That ratio is why there is room to pay more, and it is the number to defend as the team scales.

Part 1 — Your KPIs as Team Lead

1.1 The objection you raised, answered properly

You pushed back on my dismissing "% of leads qualified" because it depends on marketing lead quality — and you pointed out that held meeting rate depends on exactly the same thing. **You are right, and my v1 argument was sloppy.** Both metrics move when marketing changes the lead mix. Marketing dependency is not the distinction.

The real distinction is **who writes the number**:

	% of leads qualified	Held meeting rate
Who produces the value	The SDR	The SDR
Who <i>records</i> it	The SDR (a dropdown)	The prospect (by showing up) and the AE (by running it)
Moves if judgment loosens but reality doesn't?	Yes	No
Affected by lead quality?	Yes	Yes — equally

One is a claim; the other is an event witnessed by a third party. That is the only difference, and it is the one that matters for pay.

And the shared weakness has a shared fix. Because all four Coordinators draw from the same routed pool, lead quality is controlled by *comparing SDRs to each other within the same month* rather than to a fixed absolute. When the whole team's rate moves together, that is marketing or seasonality and it is not an SDR performance event. When one person diverges, that is coaching. Build the read that way and the marketing dependency stops mattering for both metrics.

Practically: **re-benchmark the tier thresholds each quarter against the team's actual delivered lead mix.** Fixed forever is wrong; floating monthly is unmanageable. Quarterly is the balance.

1.2 Your KPIs

You proposed lead → deal rate as your number one. **I agree, with one adjustment:** it is the right number to be *accountable* for, but it is lagging — 87% of revenue lands within 21 days, so you learn about July in late August. You need one number you are judged on and one you can steer with this week.

Primary — Team B2B Lead → Deal Rate (*what you are measured and paid on*)

Month	B2B leads	Closed	Lead → deal	Revenue
May 2026	66	13	19.7%	\$19,464
June 2026	449	48	10.7%	\$60,428

Month	B2B leads	Closed	Lead → deal	Revenue
July 2026	564	16	2.8% (<i>immature</i>)	\$18,440
Company benchmark	—	—	14.2%	—

This is the whole machine in one number, it is the business outcome, and it cannot be gamed by any marketing decision. Read it on a matured basis — prior month, run 3–4 weeks later, same timing as commission.

Secondary — Team Held Meeting Rate (*what you steer with*)

June 28.7%, July 21.6%. This is the leading half of the primary KPI: lead → deal = held meeting rate × held-to-deal rate. When lead → deal moves, this tells you whether the cause was your team's throughput or the AEs' closing.

Third — Revenue per B2B lead. June \$143, July ~\$51 matured. This is the one that catches the failure mode neither rate above can see: converting plenty of small deals while the larger enquiries leak. It is also the number that determines whether the 7% cost target is reachable (Part 3).

On speed-to-lead: you are right to leave it off your scorecard — at team-lead level it is too noisy month to month. Keep it as a *diagnostic you own*, because the evidence for it is strong (below), but don't be paid on it.

1.3 Speed-to-lead — keep as a diagnostic, not a KPI

May+June matured cohorts, B2B, first outbound Aircall call matched to lead by phone:

First touch	Share	Held rate	Lead → deal	Revenue per lead
Within 1 hour	74%	30.7%	13.1%	\$171
1–4 hours	9%	23.4%	12.8%	\$203
Over 4 hours / never	17%	23.3%	5.8%	\$61

The critical observation, and the reason "meetings booked" had to go: **leads touched more than 4 hours late still get booked into meetings at 23.3% — but they close at 5.8% instead of 13.1%.** Slow leads do not stop producing meetings. They stop producing *deals*. Any metric built on booked meetings is blind to a third of the value in the funnel.

Do not build a five-minute culture. Sub-5-minute dialling underperforms a 5–60 minute response, and it holds for each SDR individually, so it is not a mix artefact:

	0–5 min	5–60 min
MJ	\$130/lead (n=54)	\$264/lead (n=123)
Gospel	\$92/lead (n=153)	\$226/lead (n=51)

The likely cause is that an instant dial is a dial placed *before reading the enquiry* — the brief, city, shoot date and budget tier are all sitting in the record. Coach **"nothing sits past the hour,"** not "call in five minutes." Worth confirming against call recordings before it becomes policy.

Do not use dial counts for anything. June B2B leads needing 1 dial booked at 54% and produced \$251/lead; leads needing 7+ dials booked at 7% and produced \$20/lead. In July Gospel made 842 dials at a 6.8% connect rate; Levi made 349 at 51.9%. Activity metrics would rank them exactly backwards.

Part 2 — The qualified-handoff-without-a-meeting problem

You raised the strongest objection in the review: some prospects say *"email me and we'll sort it out"* or *"just text me."* Those are genuine handoffs, the AE does close them, and a held-meeting-only metric pays zero for them. **You are right, and v1 was wrong to ignore it.**

2.1 What the data actually shows

Mature cohorts (May+June), B2B, using your qualified definition:

Segment	Leads	Share	Closed	Close %	Revenue	
Qualified + meeting held	127	25%	54	42.5%	\$69,476	\$547
Qualified + no-show / rejected	8	2%	3	37.5%	\$5,690	\$711
Qualified, NO meeting at all	17	3%	4	23.5%	\$4,726	\$278
Not qualified, meeting exists	41	8%	0	0%	\$0	\$0
Not qualified, no meeting	322	63%	0	0%	\$0	\$0

A qualified no-meeting handoff is worth \$278 — 51% of a held meeting. That is a remarkably clean ratio and it gives the answer directly: **count it as half a credit.** Not zero, not one. The data set the weight, not a negotiation.

2.2 But right now you cannot see it

Here is the catch. The 17 leads in that segment break down as 12 Closed and 5 Lost — and 8 of the 12 are instant closes (self-serve, closed within 2 hours, not SDR work). **There are zero Hot or Warm B2B leads without a meeting in the entire mature dataset** (June: 32 Hot/Warm, all 32 have a meeting. July: 76, of which 75 do).

So the live "email me instead" handoff you are describing **is not being recorded anywhere.** The segment that exists in the data is almost entirely deals that had already closed.

`Qualified_SDR` looks like the intended marker but is not being used as one: 20 leads carried it in July and **17 of them also have a meeting**, so it is currently a redundant label, not a handoff state.

2.3 The fix — create the state, then pay for it

You cannot pay for what nobody records, and if you pay for a state that has no definition you will get that state applied to everything.

1. **Define one marker.** Either reserve `Qualified_SDR` to mean *exactly* "handed to AE, no meeting required — client asked for email/text" and nothing else, or add a Meeting Status option `Handed to AE – No Meeting`. The second is cleaner because it keeps the meeting axis and the qualification axis independent.
2. **Require the AE to be set** in the `Owner` field for the credit to count. A handoff with nobody to hand off to is not a handoff.
3. **Pay it at 0.5 credit**, from the measured \$278 : \$547 ratio.
4. **Cap it at 20% of an SDR's total credits** for the month. This is the anti-gaming guard: it can supplement the meeting motion but can never replace it. On June's actual data the cap binds only on MJ (7 handoffs, capped to 7 — no effect); it exists for the month somebody discovers the shortcut.
5. **Re-measure the \$278 in 90 days.** Today's figure rests on 17 leads. If the real value comes in higher once the state is being used properly, raise the weight — and tell the team you will.

2.4 This also answers your quality question

You asked how to stop the team dumping junk on the AEs once the no-show gate is gone. **The system already self-polices, and it does so through the qualified definition you chose.**

When an AE bounces a lead back, its Sales status becomes `Disqualified AE (wrong SDR qualification)` — and that status is **not** in your qualified set. The lead drops out of the qualified count entirely and the SDR loses the credit. Verified in the data: no AE-disqualified lead counts as qualified anywhere.

Current AE-disqualified rates, as a share of everything handed over:

SDR	June	July
MJ	5.6%	8.3%
Gospel	7.2%	10.4%
Mark	—	0.0%
Levi	—	7.1%

Nobody is abusing it yet, but Gospel is drifting. I have built this in as a light gate (Part 3) rather than relying on the automatic mechanism alone — the AE only re-marks the lead if they bother to, so the automatic penalty is real but leaky.

Part 3 — The SDR compensation plan

3.1 Confirmed: your qualified definition is already the live one

You asked me to check GitHub. Result: **the definition you want is what the dashboard already uses**, everywhere that matters.

`STRICT_QUALIFIED_STATUSES ( index.html:3260 ) = hot, warm, closed, lost, qualified_sdr, full refund, deposit refund, partial refund`, with duplicate-record and wrong-info leads excluded by `isLeadExcluded`. That drives `isQualifiedLead`, which is what the Summary Cards, charts, Mandate Scoreboard, Capacity & Cost, and the Commission Calculator all call.

There is a second, broader list (`QUALIFIED_SALES_STATUSES`, line 3136) that includes Pending, Quote Sent and others — **it is used only by the Data Hygiene section**, which is flagged in-code as under construction and deliberately frozen on the pre-23-July logic so its typo checks don't shift underneath it. It touches no metric and no payout. Nothing to change.

One consequence worth stating plainly: **last month's qualified rates were computed under the current definition, so they are already comparable**. No restatement needed.

3.2 What the plan does and does not keep

v1 element	Status in v2	Why
Qualified Leads Incentive (40% floor)	Removed	Fired twice in six SDR-months. Dead.
Meeting Set Incentive on <i>booked</i>	Replaced with held	Booked is nearly speed-independent; value is not
Bracket cap at 40%+	Removed	MJ's marginal reward for meeting #94 was \$0
No-show / rejection multiplier	Removed	Paying on <i>held</i> already prices a no-show at the full meeting. A second penalty double-counts, and no-show responsibility now sits with the SDR anyway
New Sales at 0.25%	0.5%	Doubled, but kept small — see 3.4
B2C in the rate numerator	Removed → own line	Was inflating rates 4–15 points, worth ~\$400/SDR/month
—	New: volume factor	Kills the small-denominator problem
—	New: AE-disqualified gate	Replaces the no-show gate as the quality counterbalance

3.3 The structure

Credits (B2B only, both sides of the ratio):

$\text{Credits} = \text{held B2B meetings} + 0.5 \times \text{qualified B2B no-meeting handoffs (capped at 20\% of credits)}$
 $\text{Credit Rate} = \text{Credits} \div \text{B2B leads assigned}$

Tier table — 1.5-point bands so no single boundary is worth more than \$65:

Credit rate	Tier	Credit rate	Tier
under 18%	\$0	30 – 31.5%	\$755
18 – 19.5%	\$350	31.5 – 33%	\$815
19.5 – 21%	\$395	33 – 34.5%	\$875
21 – 22.5%	\$440	34.5 – 36%	\$935
22.5 – 24%	\$490	36 – 37.5%	\$1,000
24 – 25.5%	\$540	37.5 – 39%	\$1,065
25.5 – 27%	\$590	39%+	\$1,065 + \$55 per credit above 39%
27 – 28.5%	\$645		
28.5 – 30%	\$700		

Why the floor sits at 18% — you asked whether 20% was arbitrary. In the old plan it was. Here it is derived: at \$547 of revenue per held meeting and your 7% cost target, an SDR on a \$1,200 base needs roughly 31 held meetings a month to cover their own base at target cost. On a typical 175-lead book that is **17.9%**. The floor is the break-even point, rounded. Below it the SDR is not yet paying for themselves and the variable should be zero.

Why the top never plateaus — above 39% the tier converts to \$55 per additional credit, uncapped. This is the direct fix for the flaw that made the old plan pointless at the margin.

Volume factor: $\min(1.0, \text{B2B leads} \div 175)$, applied to the tier only.

This closes the loophole that made Mark the highest commission earner in July on \$486 of revenue. A high rate on a small book is not the same achievement as a high rate on a full one. Capped at 1.0 so a volume windfall cannot inflate pay either. 175 is the current routed level — reset it when routing changes.

B2C kicker: \$12 per held B2C meeting. Separate line, never touches the rate. This is the answer to your question about whether B2C belongs in the numerator or on its own line: **its own line**. B2C is worth \$9 per lead against B2B's \$78, so paying it inside the same rate meant paying the same money for an eighth of the value. As its own item it stays worth chasing — free leads, no media cost, and \$12 is real money for a meeting that costs nothing to source — without ever distorting the main number.

Revenue share: 0.5% of closed revenue from own-created leads, excluding instant closes.

AE-disqualified gate — applies to the tier component only:

AE-DQ rate (of all handoffs)	Multiplier
Under 10%	×1.00

AE-DQ rate (of all handoffs)	Multiplier
10 – 15%	×0.90
Over 15%	×0.75

Graduated, computed on the payout month itself, and reproducible by hand — the three failings of the old multiplier. It is deliberately gentle: the qualified definition already removes the credit for a bounced lead, so this is a second, lighter layer on the same behaviour, not a new penalty.

3.4 Why the revenue share stays at 0.5%

Your instinct was right and worth writing down. At 1.0%, MJ's June revenue would have paid \$384 — roughly 40% of his variable — arriving weeks after the work, from deals an AE closed. That is the "I've banked enough, I can ease off" money you were worried about. At 0.5% it pays \$192: enough that a \$3,000 multi-city shoot feels different from a \$600 headshot session, not enough to coast on.

The tier does the motivating; the revenue share does the *steering*.

3.5 What it pays — modelled on actuals

June 2026 (the month you paid for in July):

SDR	B2B leads	Held	No-mtg	Credits	Rate	AE-DQ	Tier	B2C	Rev		Was		Total
MJ	225	62	7	65.5	29.1%	5.6%	\$700	\$132	\$192	\$1,024	\$946	+8%	\$2,224
Gospel	224	67	2	68.0	30.4%	7.2%	\$755	\$132	\$130	\$1,017	\$865	+18%	\$2,517
Team	449	129								\$2,041	\$1,811	+13%	\$4,741

Team comp ÷ revenue: **7.4%**. Cost per lead **\$7.27** · cost per qualified lead **\$35.92** · cost per held meeting **\$36.75**.

On the spread between them: MJ +8%, Gospel +18%. This is the plan correcting a real mis-ranking, not a calibration error. Gospel converted *better* in June — a 30.4% credit rate against MJ's 29.1% — but the old plan paid him less because it measured booked meetings and then applied a multiplier. MJ booked more; Gospel held more. Under a plan that pays for held meetings, Gospel moves up. That is the plan doing its job on its first month of data.

July 2026 (for reference — a weaker month, and still maturing):

SDR	B2B	Held	Credits	Rate	Vol factor	Tier		Was	Δ
MJ	178	36	36.0	20.2%	1.00	\$395	\$460	\$700	−34%
Gospel	166	30	30.0	18.1%	0.95	\$332	\$385	\$529	−27%
Mark	101	33	33.5	33.2%	0.58	\$505	\$567	\$301	+88%

SDR	B2B	Held	Credits	Rate	Vol factor	Tier		Was	Δ
Levi	119	23	26.0	21.8%	0.68	\$299	\$315	\$188	+68%

Note what the volume factor does to Mark: a 33.2% rate on a 101-lead book earns \$505 rather than the full \$875. Under the old plan that same month paid him the top bracket on \$486 of closed revenue. The plan now ranks him behind MJ, correctly.

3.6 The 7% question — the most important finding in this report

You asked for total comp at 7% of sourced revenue, stretching to 8% when they are killing it. Here is the arithmetic, and it is not a comp-plan problem.

Fixed base for four SDRs is \$5,100/month. That is spent before anyone books anything.

Target ratio	Revenue needed for	Revenue needed for base + \$3,900 variable
6%	\$85,000	\$150,000
7%	\$72,857	\$128,571
8%	\$63,750	\$112,500

Actual	Revenue	Comp	Ratio
June (2 SDRs)	\$64,383	\$4,511	7.0% ← already at target
July (4 SDRs)	\$19,526 (~\$28,700 matured)	\$6,818	35%

June already ran at exactly 7.0%. The target is not aspirational — it is a description of MJ and Gospel's June. What broke it was doubling headcount into a month where revenue per SDR fell by more than half.

So 7% is a revenue target, not a compensation lever. At current bases the team needs roughly **\$129,000/month** of sourced revenue for total comp to sit at 7% while paying a competitive variable. Four SDRs at June's per-head productivity (\$32,192) produce \$128,766. **The 7% goal and "get Mark and Levi to June-level productivity" are the same objective.**

The plan's cost curve, four SDRs on 200 B2B leads each:

Credit rate	Team revenue	Variable	Total comp		vs July's \$7,811
18%	\$82,080	\$2,412	\$7,512	9.2%	-3.8%
21%	\$95,760	\$2,840	\$7,940	8.3%	+1.7%
24%	\$109,440	\$3,308	\$8,408	7.7%	+7.6%
27%	\$123,120	\$3,856	\$8,956	7.3%	+14.7%
29.5% (target)	\$128,000	\$3,920	\$9,020	7.0%	+15.5%
33%	\$150,480	\$5,072	\$10,172	6.8%	+30%

Credit rate	Team revenue	Variable	Total comp	vs July's \$7,811	
36%	\$164,160	\$5,740	\$10,840	6.6%	+39%
45%	\$205,200	\$9,888	\$14,988	7.3%	+92%

The ratio **improves** as the team performs, bottoming at 6.6%, and only returns toward 7.3% at 45% — a level nobody has approached. There is no scenario in the realistic range where this plan runs away from you. Below 21% it exceeds 8%, which is correct: at that level the problem is performance or headcount, and the plan should be telling you so rather than hiding it.

3.7 Implementation

1. **Grandfather July** on the old plan, as you suggested. Announce this for August with the tables published in advance.
2. **Create the no-meeting handoff marker before go-live** (\$2.3), or that component pays nothing in month one and the team learns it is decorative.
3. **Ramp policy for new hires**, written down rather than decided monthly: month 1 at 100% of target variable guaranteed, month 2 at 50%, month 3 at zero. Two more Coordinators are coming to reach six.
4. **Keep the one-month lag**. The close-lag curve justifies it: 63.7% of revenue is in by day 7, 86.8% by day 21, 89.4% by day 28. Running 3–4 weeks into the following month captures ~89%.
5. **Re-benchmark tier thresholds quarterly** against delivered lead mix (\$1.1). Next review: end of October.
6. **Fix the B2C denominator in the dashboard regardless**. It is worth ~\$400/SDR/month of unearned incentive under the current code.

Part 4 — Team Lead compensation

You asked for a plan for yourself. I don't have your base salary, so this is the variable design with the level expressed in dollars — tell me the base and I will fit the mix.

Design principle: you should be paid on what your team produces, not on what you personally touch, and on the build-out you were hired to deliver. Three components:

4.1 Team performance — tiered on B2B lead → deal rate

Your stated number one, matured basis, prior month:

Team lead → deal rate	Payout
Under 7%	\$0
7 – 8.5%	\$250
8.5 – 10%	\$400

Team lead → deal rate	Payout
10 – 11.5%	\$575 ← June was 10.7%
11.5 – 13%	\$775
13 – 14.5%	\$1,000 ← company benchmark 14.2%
14.5 – 16%	\$1,250
16%+	\$1,500 + \$100 per additional point

May ran at 19.7% on 66 leads; June at 10.7% on 449. The floor sits at 7% because that is roughly half the company benchmark — below it the SDR layer is not earning its place in the funnel.

4.2 Revenue override — 0.35% of total team-sourced revenue

At the \$128,000 target that is **\$448/month**; at June's actual \$64,383 it is \$225. This is the component that makes you indifferent between a team that books a lot and a team that sells a lot, and it scales automatically as you add Coordinators five and six.

4.3 Build milestones — one-time, against your onboarding gates

Milestone	Payment
Coordinator 5 hired, onboarded, and through ramp (held rate ≥18% in a full month)	\$750
Coordinator 6, same standard	\$750
Full team of 6 all clearing 18% in the same month	\$1,000

Tied to ramped, not hired. Hiring is the easy half, and your Month-3 gate is "full team of 6 active" — this pays for *active*, not for signatures.

At June performance this totals \$800/month variable; at the \$128k target, \$1,023 plus milestones. Whether that is the right level depends on your base — see the questions below.

4.4 Alignment check

	Your plan	SDR plan
Primary driver	Team lead → deal rate	Individual credit rate
Revenue link	0.35% of team revenue	0.5% of own revenue
Quality guard	lead → deal is closes-only, ungameable	AE-DQ gate + qualified definition
Time horizon	Matured, prior month	Matured, prior month

You are paid on the *outcome* of the meetings; they are paid on *producing* them. That is the right asymmetry — you cannot book meetings yourself, and they cannot control which AE gets the lead. Neither of you can win by pushing volume that doesn't close.

Part 5 — Questions before this is final

1. **What is your base salary, and does the 7% ceiling include you?** This materially changes both answers. If your comp counts inside the ratio, the team needs roughly \$129,000 plus (your total ÷ 0.07) in monthly revenue, which at a \$4,000 base pushes the requirement past \$180,000. My assumption in Part 3 is that 7% covers the four Coordinators only.
2. **Should instant closes count toward the revenue base?** \$20,080 across June–July is currently excluded from both SDR credit and from the revenue denominator. Excluding it from credit is right — it isn't SDR work. But if it is counted as *team-sourced revenue*, the cost ratio improves by roughly a point and the 7% target gets meaningfully easier.
3. **Will you create the no-meeting handoff marker in Airtable?** If not, drop that component and I will re-tune the tiers — it is currently worth \$0–\$85/SDR/month, so removing it is a small adjustment, but leaving it in unmeasured is worse than not having it.
4. **Is 175 B2B leads/month the right volume-factor reference?** It reflects current routing. If you plan to push toward the 275/Coordinator capacity figure in the onboarding doc, the reference should move with it or the factor stops binding.
5. **Do you want a team component in the SDR plan?** You run two time zones with overnight round-robin routing and nothing currently pays anyone to cover a teammate's leads. A small shared kicker (~\$150 when the team clears its rate) would change that. Left out of Part 3 because you didn't ask for it.
6. **July's softness is still unexplained.** Held rate fell for both tenured SDRs while region mix moved from 95% North America to 62% NA / 30% Europe. The briefing has rest-of-world converting at 11% against North America's 16%. If this is mix, the tier thresholds should differ by desk. If it is coaching, it is fixable and the thresholds stand. Worth resolving before the quarterly re-benchmark.
